

MD-BOX
GMD SOFT

Retrieve vital data from mainboards
of mobile devices

MD-BOX is the perfect tool for retrieving data from mainboards via the JTAG interface. Whenever a phone's exterior is damaged but the mainboard is functional, investigators can connect the devices to MD-BOX to swiftly extract data through MD-NEXT.

- Gain direct access to the data you need from the mainboard of the mobile device
- Fast-track investigations by automatically scanning partitions and selectively extracting data
- Get to data faster by leveraging its Direct Memory Access (DMA) capabilities
- Resume extractions from previous cut-off points
- Access data from a wide range of devices thanks to support for a range of mobile CPUs, including MSM6XXX, MSM7XXX, APQ, Exynos, OMAP, Cortex-A, and the Xscale series
- Enjoy rapid extraction speeds of up to 1MB/sec
- Protect the evidential integrity of the data gathered with write protection and hash algorithms such as MD5 and SHA256
